

The Adobe InDesign template you downloaded can be used to prepare a print artwork for **Flipmode FAW002** wall panel system.

These templates are NOT intended as a delivery format for print artwork, unless otherwise agreed upon with your Flipmode supplier. Additional charges may apply if print material is delivered in a format not specified in the print artwork guide.

If however it is necessary to deliver the artwork as InDesign document, make sure to include all necessary assets (for example, linked images and fonts) with the file or embed them into the document.

Templates feature appropriate dimensions and bleed settings as well as spacing between panels. Preview of the actual VISIBLE AREA as opposed to PRINTED AREA is available as a layer in the template.

**IMPORTANT:**

- Hide or delete all layers with names beginning “HIDE” when exporting final print artwork.
- **It is HIGHLY recommended to use included PDF export preset in exporting the final print artwork.**
- Do not use spaces in file names. Use underscore “\_” instead.

**If you're not using our PDF export preset:**

- Use Adobe PDF version 1.7
- Export each panel as separate file.
- Use CMYK colorspace with ISO Coated FOGRA39 color profile.
- Use document bleed settings.
- Do not add any print marks.
